Contents

1 Executive Summary 27
2 What This Program Does 27
2.1 Execution Lifecycle & Boot Sequence 27
2.2 Variable Storage & Compiler Optimization 27
2.3 Binary Patching & Reverse Engineering Vectors 27
3 Identity and Fingerprints 27
3.1 Build and Metadata Facts 28
4 Sections and Memory Layout 28
5 Security Mitigations 28
6 Capabilities 28
7 Imports 28
7.1 Import Table 29
8 Exports 34
9 Strings and Indicators 40
9.1 Indicators 40
9.2 String Sample 40
10 Code Analysis 42
10.1 Largest Functions 42
11 Key Functions 43

1 Executive Summary

Observed: TAFLib.dll is a 32-bit Windows dynamic-link library for X86, a Portable Executable (PE) file of 565,248 bytes (552.0 KiB).

- Derived: imports support File system, Anti-analysis.
- Inferred: the file is not packed (packing score 0).
- Observed: missing mitigations: ASLR, DEP / NX, Control Flow Guard, Forced integrity checks, Authenticode signature.
- Observed: 4 indicators extracted.
- Derived: recovered 1,008 functions (130,353 instructions).
- Inferred: start with ?FindOpPtr@TAF_Compiler@@IAEPBUTAF_SyntaxElement@@PBD@Z at 0x1001fa40: References text "COLORKLINE".

Evidence labels: Observed facts are read directly from the file; Derived facts are computed deterministically from observed data; Inferred statements are interpretations that an analyst should confirm.

2 What This Program Does

TAFLib.dll is a 32-bit X86 dynamic-link library.

2.1 Execution Lifecycle & Boot Sequence

Under Windows X86, the operating system loader maps executable image sections at 0x10000000 and transfers control to the process entry point at 0x1006b798.

The C runtime startup routines initialize the process environment, register Structured Exception Handling (SEH) or TLS callbacks, initialize standard I/O, and transfer execution to the application entry.

2.2 Variable Storage & Compiler Optimization

Variable Storage Analysis: Read-only constants and string literals reside in the `.rdata` section, initialized global variables are stored in the `.data` section, and uninitialized globals reside in `.bss` allocated in virtual memory.

Local function variables and call arguments are allocated dynamically within processor registers and thread stack frames.

2.3 Binary Patching & Reverse Engineering Vectors

Binary Patching: Analysis revealed no direct immediate constants in the main execution loop.

3 Identity and Fingerprints

Property	Value
File name	TAFLib.dll
Size	565,248 bytes (552.0 KiB)
Format	Portable Executable (PE)
Entropy (bits/byte)	6.36
MD5	3a5268a1aca29302ea7ed13fc2d002cb
SHA-1	ff451249f95e3a04da0037af55c1bb0e1e096fdf
SHA-256	d277f1b647e4a5c1c570b0bd69eb0f3955737b65e35332a62d0da4f80ef9b588
Import hash (imphash)	302a0e4d5bbc62d3f263c653f1174629
Image kind	Dynamic-link library
Architecture	X86
Address width	32 bits
Entry point	0x1006b798
Image base	0x10000000

3.1 Build and Metadata Facts

Fact	Value
Link timestamp	2023-03-15 06:22:57 UTC (raw 0x64116441)
Subsystem	Windows GUI (2)
Linker version	8.0
Debug database (PDB)	d:\RLD\pro\RNF_X\release\TAFLib.pdb (GUID e55d642237843c4a8859e3634ff388c5, age 51)
Rich header	Present (Microsoft toolchain fingerprint, key 0x7a8e7a74)
Internal module name	TAFLib.dll

4 Sections and Memory Layout

Observed: 5 sections (1 executable, 1 writable, 0 both).

Name	Address	Virtual size	Raw size	Entropy	Access
.text	0x10001000	0x6d20b	0x6e000	6.45	R-X
.rdata	0x1006f000	0xccd2	0xd000	5.47	R--
.data	0x1007c000	0x817c	0x8000	1.97	RW-
.rsrc	0x10085000	0x5b4	0x1000	4.33	R--
.reloc	0x10086000	0x4a84	0x5000	5.79	R--

5 Security Mitigations

Observed: each verdict cites the header field or import that decides it.

Mitigation	Status	Evidence
ASLR	Missing	OptionalHeader.DllCharacteristics DYNAMIC_BASE
DEP / NX	Missing	OptionalHeader.DllCharacteristics NX_COMPAT
Control Flow Guard	Missing	OptionalHeader.DllCharacteristics GUARD_CF
Forced integrity checks	Missing	OptionalHeader.DllCharacteristics FORCE_INTEGRITY
Authenticode signature	Missing	Certificate table

6 Capabilities

Derived: capabilities come from the APIs the program imports; an import shows ability, not proof of use.

Capability	What it enables	Imported APIs
File system	Creates, modifies, deletes, or enumerates files	fopen
Anti-analysis	Detects debuggers or hides from analysis	IsDebuggerPresent

7 Imports

Observed: 228 imported functions from 9 libraries.

Library	Imported functions
KERNEL32.dll	13
MFC80U.DLL	11
MSVCP80.dll	28
MSVCR80.dll	66
RCommon.dll	1
RDM_C.dll	16
RData.dll	59
chlib.dll	2

Library	Imported functions
rld_lib.dll	32

11 Key Functions

Inferred: functions are ranked by the capability-relevant APIs they call and the indicators they reference. Listings use Intel syntax with imports, functions, and strings resolved in comments.
